

Green Defence

Conference on Contemporary Security Challenges,
Green Technologies, and Green Strategies

Wednesday, November 9th 2016

09:00 - 18:00, Bageriet at Kastellet, Gl. Hovedvagt, Kastellet 1, 2100 Copenhagen

Armed forces are among the biggest public consumers of fuel and other resources in modern societies. This September, Denmark released a new green defence strategy and other nations have also adopted comparable policies and strategies to address challenges such as resource scarcity, budgetary constraints, and logistics and fuel consumption in operations. To discuss and identify sustainable policies and practices as a new important aspect of defence policy, CMS hosts an international conference on green defence. The conference will provide a unique platform for knowledge-sharing, networking and collaboration between national and international stakeholders.

Speakers include:

- Ben Van Hecke, *Office of the NATO Chief Scientist*
- Susanne Michaelis, *NATO Science for Peace and Security Programme*
- Niels Henrik Hedegaard, *Planning Division, Danish Ministry of Defence*
- Klaus Bolving, *CENSEC*
- Leo S. Mackay, Jr., *Lockheed Martin*
- Kristian Knus Larsen, *Centre for Military Studies*

Register and see full updated program at: <http://cms.polsci.ku.dk/>.

Registration is required.
